Important Information

Your Global window film requires a brief period of time before its mounting adhesive can thoroughly bond to the glass.

Dry Out

A trace of mounting solution may remain after installation. Dry out time is dependent on weather conditions and the type of film installed. High performance (HP) films typically require slightly longer dry out time compared to Non Reflective (NR) films. During the dry out time it's normal for a slight moisture—haze to appear. If this occurs, do not worry, it will go away.

Important

It is possible for some mounting solution to collect, resulting in small water bubbles. If this occurs, do not touch them, they will dry out. If the bubbles become excessive do not be alarmed, simply return the vehicle to your dealer for service.

Cleaning Solution

A few drops of a mild liquid soap and tap water mixed in a spray bottle works well. Most mild glass cleaning materials will also work fine.

Cleaning Cloth

Although your Global window film has a durable scratch resistant coating, you should always clean and dry it with a non abrasive cloth.

THANK YOU

We Sincerely Appreciate Your Business
